

# The STARS Celebration Conference

The STARS Celebration is an annual gathering of the STARS Computing Corps, a national community with a mission to broaden participation in computing through student-led regional engagement. STARS students undertake year long leadership projects in collaboration with industry and community partners to build the computing education pipeline through outreach and research. The Celebration brings the Corps together to showcase prior year leadership project accomplishments while sharing fresh ideas for upcoming year projects. Over the past seven years, more than 1,710 participants have attended from a diverse range of computing and cultural backgrounds. Through our dedication to recruiting, retaining, and engaging the brightest minds in computing, we are building and preparing a larger, more diverse national computing workforce for the 21st Century.
